

**DOES THE WORK OF ACETIC ACID
AND MUCH MORE**
Changes Color When Exhausted!

Are you finding it impossible to secure Acetic Acid for your shortstop bath? Here's your answer: "SIGNAL", the revolutionary new shortstop with many advantages over Acetic Acid.

SIGNAL, colorless when fresh, turns rose-red when worn out! Thus it saves money since you can use your stopbath until the red warning signal shows up. And it avoids streaked, ruined prints caused by exhausted stopbaths. SIGNAL can be substituted for 28% Acetic Acid in all formulas . . . keeps well . . . is suitable for all films and papers . . . has no unpleasant odor. Ask Your Dealer for SIGNAL Shortstop.
